Al Dar Properties

- Yesterday, the stock formed a long bullish candlestick pattern on the daily chart and finished above the upper Bollinger band (currently placed at AED2.32) at AED2.35, after moving as high as AED2.36.
- As clearly visible on the daily chart, the momentum oscillators are tranquil above their midlines, reflecting a bullish technical scenario. Similarly, the weekly momentum oscillators are trading with strong bias, further affirming the above stance.
- Important resistance is seen at the AED2.36 level, followed by the AED2.38 and 200day SMA (currently placed at AED2.40) levels. A sustained break above the latter might lead to further positivity in the stock.
- Meanwhile, key support resides at the AED2.32 level, followed by the AED2.30 and the 100day SMA (currently trading at AED2.28) levels. A breach below the latter might lead to negative momentum in the stock.

Dubai Investments

- The stock traded higher in the prior session and ended at AED2.16.
- A possible centreline crossover by the daily MACD to trade into the positive region coupled with the RSI pointing towards the north, hints the presence of bullish momentum in the coming session. Moreover, the weekly RSI and stochastic oscillators are trading with an upside tone, further endorsing the above view.
- Key resistance aligns at the daily upper Bollinger band (currently trading at AED2.18), a break above which might lead to further bullishness in the stock, paving way for AED2.20 and the 100day SMA (currently placed at AED2.21) as the next possible resistances.
- On the downside, crucial support is placed at the AED2.13 level, followed by the 20day SMA (currently trading at AED2.11) and AED2.09 levels. A breach below the latter might trigger negativity in the stock.

AGTHIA

- The stock recorded modest gains in the previous session and settled at AED5.39, following a high at AED5.46.
- Although the daily MACD is heading upwards, the RSI and stochastic indicators are showing loss of upward potential, reflecting a weak technical outlook. On the weekly chart, the momentum oscillators are trading at a lower level below their centrelines, further supporting the above view.
- Key near-term support is situated at the AED5.30 level, followed by the daily lower Bollinger band (currently placed at AED5.20) and AED5.10 levels. A move back below the latter might lead to bearish pressure on the stock.
- On the bright side, immediate resistance is placed at the AED5.46 level, followed by the 20day SMA (currently trading at AED5.53) and AED5.59 levels. A break above the latter might lead to further positivity in the stock.

Union Properties

- Following two straight bearish sessions, the stock traded firmer in the last session and settled at AED0.926, after making a high at AED0.934.
- On the daily chart, the MACD and RSI heading upwards along with the stochastic placed near its overbought region hints at bullish momentum in the coming session. Besides, the weekly RSI and stochastic indicators are trading with a positive bias, further affirming the above stance.
- Key intraday resistance is placed at the AED0.930 level, followed by the 50day SMA (currently placed at AED0.935) and 100day SMA (currently trading at AED0.942). A sustained break above the latter might trigger further upside momentum in the stock.
- Conversely, key support resides at the 20day SMA (currently trading at AED0.920), followed by the AED0.915 and AED0.910 levels. A breach below the latter might lead to bearishness in the stock.

Dubai Islamic Bank

- The stock traded with a positive tone in the previous session and ended at AED5.80.
- As of now, the daily MACD is trading above its centreline along with stochastic and RSI indicators moving upwards, hints the presence of positive momentum in the coming week.
- Key resistance is located at the AED5.82 level, followed by the AED5.84 and the daily upper Bollinger band (currently placed at AED5.85). A surge above the latter might trigger a further acceleration to the upside.
- However, the weekly MACD and stochastic oscillators are trading with a negative showing, suggesting that room for downside still exists. Immediate support is placed at the AED5.75 level, followed by the daily lower Bollinger band (currently trading at AED5.73) and AED5.71 levels. A breach below the latter might lead to negative momentum in the stock.

DXB Entertainments

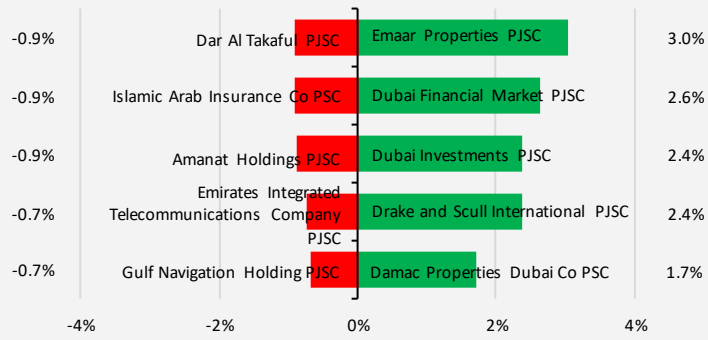

- The stock traded with a bullish showing in the last session and ended at AED0.750, after hitting a high at AED0.752.
- Although the daily MACD is pointing north, the RSI and stochastic indicators are trading at a lower level below their midlines, reflecting a bearish technical picture. Likewise, the weekly MACD is heading lower along with the RSI and stochastic tranquil in their oversold regions, further validates the above view.
- Key support is positioned at the AED0.740 level, followed by the AED0.731 and AED0.720 levels. A move back below the latter might lead to weakness in the stock
- On the other hand, the key technical barrier is placed at the AED0.760 level, followed by AED0.770 and the 20day SMA (currently trading at AED0.780). A break and stability above the latter might trigger further strength in the stock.
