Eshraq Properties

- On Thursday, the stock traded in the red for the fifth consecutive session and settled below the daily lower Bollinger band (currently placed at AED0.930) at AED0.860.
- A recent negative centreline crossover by the weekly MACD along with the RSI & stochastic indicators moving downwards, hints at bearishness in the coming week. Furthermore, the daily momentum oscillators are placed at a lower level below their midlines, further endorsing the above view.
- Key technical support is located at the AED0.850 level, a breach below which might lead to increased selling pressure on the stock, paving way for the AED0.840 and AED0.830 levels as the next possible supports.
- However, a weekly lower Bollinger band crossover suggests that the stock might witness some recovery. Immediate resistance is placed at the AED0.870 level, followed by the AED0.880 and AED0.890 levels.

GFH Financial Group

- The stock formed a long bearish candlestick pattern on the daily chart on Thursday and ended below the lower Bollinger band (currently trading at AED1.93) at AED1.81.
- With the daily MACD and RSI heading south and the stochastic indicator tranquil in its oversold region, the near-term technical outlook appears to be bearish. Moreover, a potential negative centreline crossover by the weekly MACD along with the RSI and stochastic placed below their 50lines, further confirms the above view.
- Key support is positioned at the AED1.77 level (last touched in December 2016), followed by the AED1.73 and AED1.70 levels. A breach below the latter might lead to further bearishness in the stock.
- However, a daily lower Bollinger band crossover indicates a possible reversal in the stock. Crucial resistance is placed at the AED1.85 level, followed by the AED1.90 and AED1.95 levels.

Dubai Islamic Insurance and Reinsurance Co

- The stock traded with a bearish tone on Thursday and closed at AED0.840.
- As clearly seen on the weekly chart, the momentum oscillators are trading with a slightly downside bias, hinting the presence of negative momentum in the coming week. On the daily chart as well, the MACD and RSI oscillators are moving lower, further validating the above stance.
- Key support to be watched is situated at the AED0.830 level, followed by AED0.820 and the 50day SMA (currently placed at AED0.810) levels. A move back below the latter might lead to further downside momentum in the stock.
- On the other hand, key resistance is positioned at the AED0.850 level, followed by the 100day SMA (currently trading at AED0.860) and AED0.870 levels. A break above the latter might trigger positivity in the stock.

Damac Properties Dubai Co

- The stock advanced for the third consecutive session on Thursday and ended above the daily upper Bollinger band (currently placed at AED3.11) at AED3.16, following a high at AED3.19.
- Currently, the daily momentum oscillators are trading at a higher level above their centrelines, reflecting a bullish technical picture. Similarly, the weekly momentum oscillators are trading with a strong bias, further supporting the above view.
- Intraday resistance is seen at the AED3.19 level, followed by the AED3.23 (last touched in October 2015) and AED3.26 levels. A surge above the latter might lead to further bullishness in the stock.
- However, a daily and weekly upper Bollinger band crossover indicates a likely correction in the short-term. Crucial support is placed at the AED3.13 level, followed by the AED3.10 and AED3.07 levels.

Dubai Financial Market

- The stock traded with a negative showing on Thursday and finished at AED1.11.
- A potential centreline crossover by the daily MACD to trade into the negative region accompanied by the RSI and stochastic indicators pointing south, hints the presence of bearish momentum in the near-term. Likewise, the weekly momentum oscillators are trading with a negative bias, further substantiating the above view.
- Key support is aligned at the AED1.09 level, followed by the AED1.08 and the daily lower Bollinger band (currently placed at AED1.07) levels. A move back below the latter might lead to further negativity in the stock.
- On the bright side, crucial resistance is located at the AED1.12 level, followed by the AED1.13 and the 50day SMA (currently placed at AED1.14) levels. A surge above the latter might lead to strength in the stock.

ARAMEX

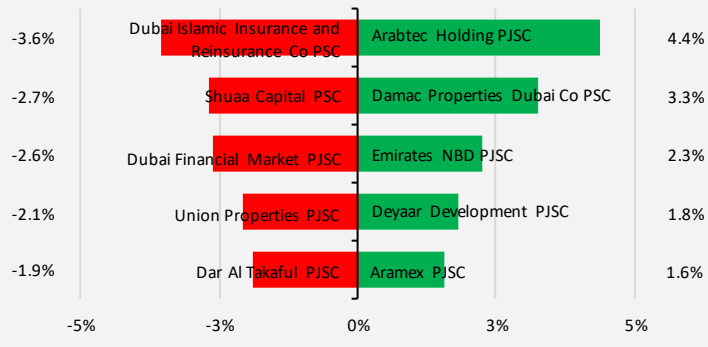

- The stock traded in the green on Thursday and settled above the 50day SMA (currently placed at AED5.15) at AED5.18, after notching a high at AED5.20.
- Although the weekly MACD is heading south, the RSI and stochastic oscillators are moving upwards, reflecting at a bullish technical scenario. On the daily chart, the momentum oscillators are placed at a higher level above their midlines, further affirming the above stance.
- The daily upper Bollinger band (currently trading at AED5.20) is acting as an important resistance, a break above which might lead to a further acceleration to the upside, clearing its way for the AED5.22 and AED5.25 levels as the next possible resistances.
- On the contrary, key short-term support is situated at the AED5.15 level, followed by the AED5.12 and the 20day SMA (currently placed at AED5.09) levels.
